Restriction to one of the following inventions is required under 35 U.S.C. 121:

 Claims 1-29, drawn to a method for providing product consistency and controlling the particles, classified in class 436, subclass 8.

II. Claims 30-43, drawn to methods of producing a target material and the associated control, classified in class 428, subclass 402+.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process as claimed can be used to make another and materially different product such as one that has a plurality of difference morphological values as created by the process of adjustment which is distinct from the claimed product that has one morphological value.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

During a telephone conversation with Mr. Kilyk on 7/24/06 a provisional election was made with traverse to prosecute the invention of group I, claims 1-29. Affirmation of this election must be made by applicant in replying to this Office action. Claims 30-43 withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Application/Control Number: 10/649,347

Art Unit: 1743

The Examiner acknowledges receipt of the lengthy information disclosure statements filed 10/27/03;12/02/04;3/7/05 and 7/21/05. There is no requirement that applicants explain the materiality of English language references, however the cloaking of a clearly relevant reference in a long list of references may not comply with applicants' duty to disclose, see Penn Yan Boats, Inc. v. Sea Lark Boats, Inc., 359 F. Supp. 948, aff'd 479 F. 2d. 1338. There is no duty for the Examiner to consider these references to a greater extent than those ordinarily looked at during a regular search by the Examiner. Accordingly, the Examiner has considered these references in the same manner as references encountered during a normal search of Office search files.

## Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The preamble of the claims are directed to ".... providing product consistency..." and a method of "... controlling a process...". However, the bodies of the claims fail to teach any measuring steps where the consistency and control processes are preformed. For the purposes of examination, the claims are best understood as methods of measuring the claimed parameters and controlling the process to maintain the desired parameters.

Art Unit: 1743

These claims are also vague and indefinite what is intended by "interfacial potential". This value is not defined in the claims and one having ordinary skill in the art would not be able to determine the claimed interfacial potential value.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-29 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Reszler (USP 5,974,167) cited by Applicants.

In light of the above 35 USC 112 second paragraph issues, the invention is best understood as a method of monitoring the quality of carbon black, a metal oxide or silica particles by measuring a parameter of the particle and comparing the measured parameter to a predetermined standard value.

Reszler teach in column 5 lines 40+ measuring physical parameters, such as particle size, of carbon black, metal oxides and silica particles. Column 4 lines 21+ teach a method of measuring the particle size and comparing the measured size to a predetermined standard value.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lyle A. Alexander whose telephone number is 571-272-1254. The examiner can normally be reached on Monday, Wednesday and Friday.

Art Unit: 1743

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill Warden can be reached on 571-272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
